

Accurately monitor who's on or off-site with Optimised Visitor Management

Are there employees and service providers working at risk in your duty of care?

Whether you work in an office, a manufacturing plant, a large construction site or even the open road, integrating your Optimised Visitor Management system (OVM) with WolMobile you'll be able to instantly communicate crucial safety notices with everyone onsite, know who's working alone or at risk, and have the confidence you can locate everyone quickly and efficiently in the event of an emergency.

Automatic, location-based sign in

It's quick and easy to set up a geofence around your location in OVM with our drag and drop tool. Once configured, any WolMobile app users who cross the geofence will be automatically signed in, or signed out as they leave. Bluetooth beacons make auto sign in/out even more accurate for built up locations.

Quick and easy communication

Share instant messages with everyone on-site to alert employees, visitors and service providers to hazards and important notices. These could be to alert everyone on-site that you have an intruder in reception, damage in a stairwell or spillage on the factory floor - the options are endless. Instant messages can be sent via SMS, push notification or email. Separate acknowledgment notices can be set to ensure everyone has received and read important notices when they sign in/out.

Always have visibility

WolMobile is backed with extensive reporting to ensure you always have visibility of employee, visitor and contractor movements within your organisation. Through reporting, you'll be able to gain valuable insights and locate a person if an SOS alert was activated. Reporting isn't just about who's on and off-site - you can also report on who has or hasn't acknowledged a notice or the geolocation of those in your duty of care.

Location tracking with Follow Me

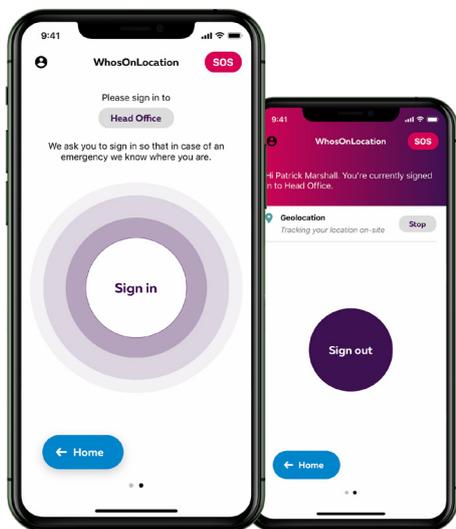

Keep those on-site or working remotely safe using Follow Me to track their location. Follow Me can be used in a number of ways depending on your organization's needs; send a geolocation update, follow continuously on-site, or follow continuously between sites. This feature helps you to account for everyone in the event of an evacuation, and to check in on the movements of those working in high risk areas. Once an employee is off-site, tracking ends.

Managing on-site access

Need employees or service providers to sign in at the kiosk or Sign In/Out Manager but still want to access other great WolMobile features? No problem. Employees and service providers can sign in using a unique QR code saved in their WolMobile app to speed up the sign in process at the kiosk - a great option for contractors and visitors if you don't want to print badges. Those with the app can then also receive instant messages.

Managing and monitoring remote and high risk workers

Take the complexity out of managing and monitoring employees or service providers working remotely or in at risk situations. Using WolMobile they can log their hours and update their geolocation. This allows nominated safety contacts within your organisation to track their location and ensure employees and service providers are always safe.

WolMobile is a native app built for iOS and Android and can be added as a widget to your smartphone for quick and easy sign in.

Emergency SOS alerts

Employees, visitors and contractors can activate an SOS alert when they need immediate assistance. SOS responders are alerted in real-time with the information needed to provide help as quickly as possible. This includes who triggered the alert, their mobile number, location, date and time of the alert.

Know what's happening on-site

As a key function in the safety and security of your location, those employees who's role it is to manage the safety others can receive alerts to be notified of events happening on site. e.g. a Facility Manager with the Safety Operator role type can receive alerts whenever a contractor signs in with WolMobile, allowing them to meet and greet and talk through job details. Alerts can also be set up to alert Safety Operators when a Service Provider attempts to sign in and has an expired induction or insurances.

Safety Operators will also receive alerts (if necessary) detailing those who require evacuation assistance

Welcome to Complete I.T.

Our mission is to help our customers create their own workplace of the future.

Our passion is to get to the heart and goals of our customers' businesses and people. Our products and services will continue to evolve, keeping pace with a rapidly changing world and workplace. We are committed to meeting and exceeding your needs, now and into the future.
