Complete Endpoint Security

Managed anti-virus and web protection

Complete Endpoint Security offers highly respected and proven AV & Web Protection products that can be applied to every one of your machines automatically, saving the cost and complication of operating a stand-alone alternative.

Managed AV & Web Protection provide the highest levels of security against the ever increasing risk of viruses and malware, both local and web based, these can be easily added as options to our Complete Endpoint Security Solution.

Looking after your servers is only half the story, but what about the PCs and laptops that your team use to carry out their roles meaning they have access to all your critical business data?

Complete Endpoint Security allows us to monitor and secure critical aspects of your end user devices and ensures your critical company data is protected from threats.

Complete Endpoint Security Features and Benefits:

Monitoring

Monitor the Anti-Virus protection of all endpoint devices.

Track IT Assets

Track all of your IT assets' age and specification, including serial and model numbers.

Automatic Updates

Carry out automatically scheduled updates (patch management) of Windows and selected 3rd party applications.

Cyber Security Risk Assessment

Together with your Technical Consultant, you will be able to produce a Cyber Security Risk Assessment report that your business can use to demonstrate compliance and plan future cyber security initiatives.

Compliance and Security

Our Compliance and Security module automatically applies our recommended security settings and additional settings that we can configure for you, such as disabling the use of USB storage devices, to all your endpoints and enforces protection every 5 minutes.

Endpoint History Reporting

Reporting to show the performance history of all endpoints, allowing your business to demonstrate the commitment you have made to securing your data (remember GDPR is about demonstrating and not just doing).
