

Complete Firewall Protection

There has been a prolific rise in cyber threats over the last few years and new ways of compromising IT networks and data are being developed all of the time. We are constantly researching and testing the leading defence methods and as always we recommend a multi-layered approach.

Protecting your organisation and data from the threat of hackers, malware and viruses is a serious business. With so much critical data being held not only on your servers, in the cloud, on laptops, desktops and hand-held devices, your business needs an integrated security solution.

We have implemented a wide range of security solutions for our clients and as such, have a wealth of expertise and experience of all the major security tools and technologies.

Complete Firewall Protection is a solution providing a business grade level of protection for your organisation giving you peace of mind that you have the highest levels of security in place. At the heart of this service is a Firewall device, software will be installed on all of your PCs, Laptops and Servers to monitor suspicious behaviour.

The Firewall and software will be monitored by your CIT team as part of the Complete Firewall Protection service, any suspicious behaviour will be flagged immediately, and remedial action will be taken often before you even know about it. Updates will be carried out as and when there are new releases and you will be provided with regular reports.

Your Complete Firewall Protection service includes:

Intrusion Prevention

Software that proactively monitors a network and takes preventative measures against suspicious activity.

Intrusion Detection

Software that monitors a network and alerts the user if suspicious activity is found.

Web Filtering

Software designed to restrict what websites a user can visit on their computer.

Content Filter

Software that restricts or controls the content that a user is capable to access.

Malware Filtering

Software that helps protect a user from malicious software.

Data Loss Prevention

Software that detects potential data breaches and prevents them by monitoring, detecting and blocking sensitive data while in use.

Reputation Enabled Defense

Reviews the destination of outbound connections and identifies its threat level based on intelligence feeds. Using the returned threat score, known threats are blocked and safe destinations are allowed.

Gateway Anitvirus

Gateway Anti-Virus allows applications to check files for viruses by providing a SOAP-based virus scanning web service.
