

Microsoft Azure

Microsoft Azure is a cloud platform and infrastructure that allows businesses to move fully to the cloud, or alternatively to operate hybrid solutions with some services, data or applications remaining on premise.

An ever-expanding set of cloud services to help your organisation meet your business challenges. It's the freedom to build, manage and deploy applications using your favourite tools and frameworks. At Complete I.T. we have substantial experience in helping you decide which route is best for your business, and using Azure gives us the flexibility to provide a tailored solution.

If you are considering moving some or all of your infrastructure or services to the cloud, then Azure from Microsoft will fit the bill.

- Provides the highest level security in European data centres that meet the strict EU privacy regulations.
- Provides 99.9% uptime to ensure your business is always operating and able to access your systems.
- If you choose to host all your servers in Azure, you will benefit from reduced costs in terms of server warranties and electricity. No upfront or capital costs, just easy to budget monthly charges.
- If you have an application that's used only during the day, you can save money by automatically reducing the amount of 'horsepower' behind the server or even powering it off entirely, or if you suddenly need a lot more power they can very quickly spin up more servers.
